

US-TX-Dallas- Senior Software Engineer/DBA

Trintech Group Plc (NASDAQ: TTPA) is a leading global provider of financial software and services specializing in reconciliation workflow, revenue enhancement, transaction risk management, and compliance for commercial, financial, and health care markets. For over 20 years, Trintech has been providing comprehensive, industry-leading solutions to financial departments seeking greater insight into critical transaction processes. Trintech delivers a configurable, highly scalable platform that incorporates a company's unique business processes, enabling managers to obtain greater visibility and more efficiently manage business risk throughout the transaction lifecycle.

Scope of Position:

The ideal candidate for the Software Engineer position must have strong experience in Microsoft SQL Server database optimization and tuning in the context of native web based application software. This individual must have Object-Oriented development experience in complex C# .NET environments. He/she must be a self-starter, have excellent communication skills and be an adaptable team player.

Essential Knowledge and Abilities:

- Strong capabilities in the area of database software optimization.
- Candidate must be able to reference specific optimization project involvement.
- Experience in creating and executing large scale performance test plans which demonstrate performance bottlenecks and prove that functional changes will have the desired effect.
- Must have experience in design and implementation of testing procedures and hands on experimental code modifications which target latency and throughput improvements within a wide variety of product components.
- Candidate will be certified as an MS DBA or equivalent years of experience in managing database infrastructure.
- Strong knowledge of TransactSQL, stored procedures, and SQL profiling and tuning tools.
- Strong knowledge of development processes & techniques
- Strong knowledge of Object-Oriented analysis and design
- Strong knowledge and capabilities in C# & .NET
- Excellent programming experience (>8 years).
- Broad knowledge and capabilities (>4 years) in Object Oriented environments
- Strong knowledge and capabilities in web-based (ASP.NET) architecture
- Solid knowledge of XHTML, XSL, XML, XSLT
- Solid knowledge of Relational Databases: SQL Server 2005 & 2008. Oracle experience preferred.
- Solid knowledge of Microsoft .NET platform architectures.

Essential Education and Experience:

- BS with concentration in Computer Science or Engineering preferred
- 8 years experience in software development roles
- Experience in enterprise application architectures and software deployment
